

CLAIMS

1. A roller comprising a substantially cylindrical body and a handle pivotably attached to the body, the body comprising a chamber for containing a liquid, an outlet in fluid communication with the chamber and pump means for dispensing a liquid from the chamber through the outlet.
2. A roller according to claim 1 wherein the handle is detachable from the body.
3. A roller according to claim 1 or 2 wherein the handle is attached to one end of the body.
4. A roller according to any of the claims 1, 2 or 3 wherein one end of the roller is detachable.
5. A roller according to claim 4 wherein the detachable end cap comprises a handle portion.
6. A roller according to any of the preceding claims wherein the body comprises a central shaft.
7. A roller according to any of the preceding claims comprising means for compressing material stored within the chamber.
8. A roller according to any of the preceding claims wherein the pump means extend through one end of the body substantially along the axis of the body.
9. A roller according to any of the preceding claims wherein the body comprises a second chamber located within the first chamber.

10. A roller according to any of the preceding claims further comprising a
hose which may be stored within the handle.

5 11. A roller according to any of the preceding claims further comprising a
plurality of spikes provided on the outer surface of the above.

12. A roller according to any of the preceding claims further comprising
edging means attached to one end cap.

10 13. A roller initially as hereinbefore described with reference to and/or
shown in the accompanying drawings.
